

The Polaris Vac-Sweep® 280 sweeps, scrubs and vacuums the bottom and walls of any size pool. Powered by a separate booster pump, the 280 works at 100% efficiency, cleaning independently from the rest of the pool circulation system.

The Polaris 280 climbs walls, and manuevers over stairs, picking up large debris like leaves, acorns and pebbles in its extra large vacuum opening. The unique filter bag removes debris before it reaches the pump basket or filter, reducing filter cleanings up to 80%, prolonging the life of the filtration system and saving maintenance time.

As the cleaner travels in the pool, it also distributes heated water and sanitizer to the deepest parts as it cleans. In a few hours, the 280 completely cleans the pool, giving you more time to enjoy it.

The Polaris 280 is available in a BlackMax model to complement dark-bottom pools or a TankTrax model for the most challenging of pools with steep breaks.
